

Clean, healthy AIR & lower energy bills

AspenAir award winning air
cleaners pay for themselves

Clean, healthy air

- Captures 99% of harmful small particles
- 99% bacterial kill rate
- No ozone

Lower heating & cooling bills

- Improved airflow saves up to 30%
- Clean HVAC equipment can save an additional 21%
- Operates on 2 watts – less than \$4 per year

Affordable

- Pays for itself in 2-3 years
- May qualify for government rebates & financing

Simple & worry free

- Installs quickly in new & existing HVAC systems
- Simple maintenance – replace media once to twice a year
- Straight-forward 5 year warranty

AspenAir Inside™ - A Responsible, “Honest Green” Way to Reduce Your Carbon Footprint

- Consumes 95% less energy than other Electronic Air Cleaners
- Recyclable chassis, faceplate, collection media & packaging

We Also Recommend:

- Maintain HVAC system as directed – keep coils clean
- Seal & clean ducts.
- Install a variable speed fan.
- Upgrade to a 2-stage AC or heat pump to control humidity
- Install UV light at coil
- Seal exterior doors & windows
- Introduce outside air – ventilate

Symptoms of Poor IAQ

- Flu symptoms / virus
- Headaches
- Coughing
- Nausea
- Fatigue
- Sore, scratchy throat
- Nasal and sinus congestion
- Dry, red or watery eyes
- Sleeplessness / snoring
- Difficulty breathing

Sources of Poor IAQ

- Airtight homes
- Poor ventilation
- Inadequate air filtration
- Indoor pets
- Second-hand tobacco smoke
- Leaky HVAC ducts
- Furnace exhaust fumes
- Shedding carpet, drapes, area rugs & fabrics
- Garage fumes
- Indoor laundry areas
- Cooking
- Cleaning products
- Busy roads/highway
- Open fields, pollinating plants & trees
- Smoke from fires or industrial smokestacks
- Printers & fax machines
- Mold
- Virus exposure

Most Vulnerable to Poor IAQ

- Children
- The elderly
- People with allergies & asthma
- People with COPD, Emphysema, heart disease & respiratory diseases

Why plug-in, single-room cleaners don't solve IAQ problems

- Only cleans air in immediate proximity
- Several units needed for entire home
- Consume enormous amounts of energy – some up to 250 watts
- Frequent, difficult cleaning required
- Costly proprietary media required
- Emit ozone – unhealthy to homeowners & damaging to environment
- No professional monitoring, maintenance or performance assurance
- No in-home warranty service
